

FIREWALL

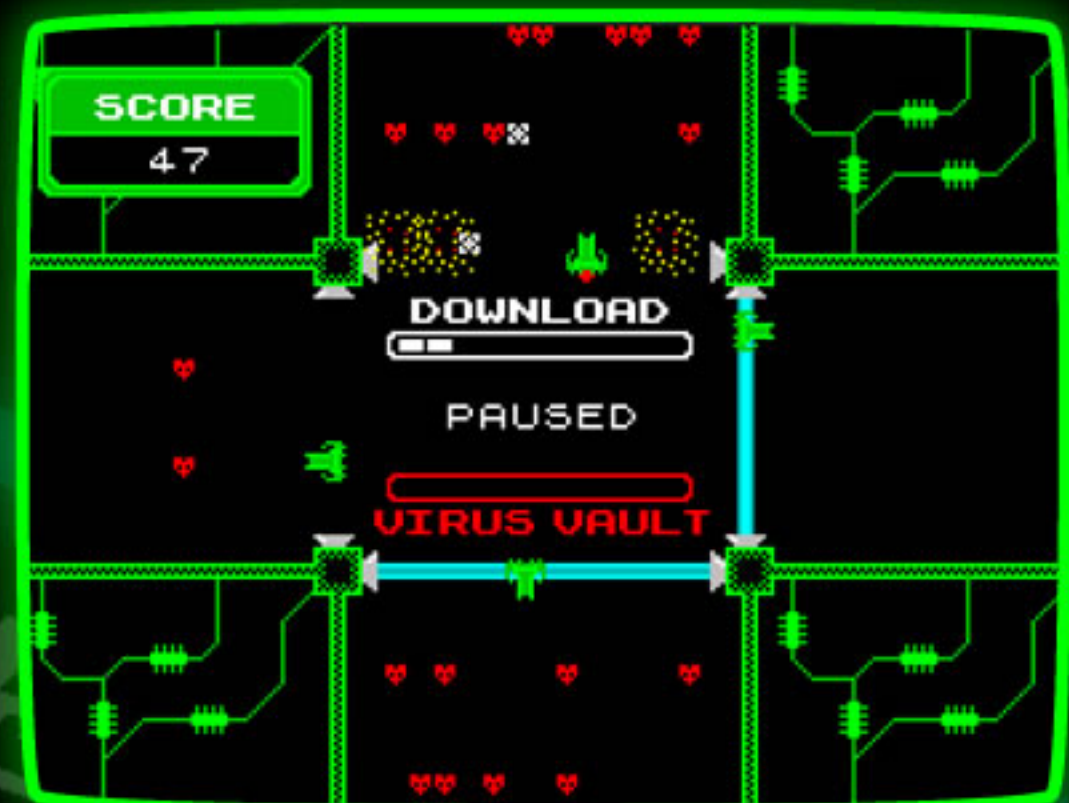

48K

CONTROL THE FIRST DEFENSE

IN FIREWALL 48k, control a computer firewall defense program as you battle against hundreds of viruses forcing their way through during a series of important file downloads.

Your job is to fight against the malicious traffic using four turret programs while allowing the download sequences to proceed.

Each completed download contains data for the antivirus to flush out all viruses that have breached the firewall and entered the virus vault. Although, if there are too much malicious traffic in the virus vault, the computer system will crash and all information will be wiped clean.

GOOD LUCK, USER!
